

DropSafe Inject-Safe Barrier Bandage

Providing clinicians with an *increased level of protection during vaccine administration* this flu season

October 31, 2022

DropSafe[®] Immunization Safety Suite

Vaccination programs continue to be a key initiative for the US healthcare system specifically in hospitals, doctor’s offices, and pharmacies. Co-administration of vaccinations has become increasingly common (Flu + COVID-19 Booster, etc) following the latest [CDC recommendation](#) that providers should offer all vaccines for which a person is eligible at the same visit.

As the volume of vaccines administered increases through co-administration, what frequent risks do healthcare professionals face when delivering vaccinations?

1. Potential for blood pathogen exposure due to direct contact with injection site after the vaccination.

2. Needlestick injury (NSI) resulting from failure to immediately activate the safety mechanism of the contaminated needle.

DropSafe Inject-Safe Barrier Bandage is the latest innovation for immunizations, designed to protect frontline caregivers from the risks associated with contaminated sharps post-injection.

What is DropSafe Inject-Safe Barrier Bandage?

A patented pre-injection self-adhesive bandage applied prior to subcutaneous or intramuscular injection, providing containment of post-injection bleeding.

How does DropSafe Inject-Safe Barrier Bandage Protect?

- Innovative physical barrier to limit healthcare professional contact to exposed injection site.
- Enables healthcare professional to focus on immediate activation of the safety mechanism and properly dispose of the contaminated needle and syringe.
- Eliminates the necessity to return to the injection site.

DropSafe Inject-Safe Barrier Bandage is becoming commonly used as part of best-in-class immunization programs nationwide!

- Walmart
- Sam's Club
- Kroger
- US VA Hospitals

As a global leader and innovator in safety medical sharps, HTL-Strefa, Inc. is excited to announce the launch of **DropSafe® Immunization Safety Suite**, a unique portfolio of products specifically curated for front-line clinicians administering vaccinations.

DropSafe Immunization Safety Suite is comprised of four high-quality products that can be considered essential tools to caregivers on the front-line. With a unique suite of tools designed to deliver a complete vaccination experience, healthcare professionals can feel confident that their safety is front and center.
