

# Pressure injury challenges in a new era

Prone positioned patients

Pressure injuries (PI) continue to present substantial clinical challenges to health care professionals and place a huge economic burden on health care providers. They also have a huge impact on the quality of life of patients and their carers. Prone-positioned patients are particularly susceptible to PI. Mölnlycke® invites you to join its webinar series to listen to key thought leaders offer insight into how they have addressed these challenges during the COVID-19 pandemic.
