

YOU HAVE THE POWER to PROTECT YOUR PATIENTS and EQUIPMENT

Sani-HyPerCide™

+ PDI
BE THE DIFFERENCE

INTERVENTIONAL CARE PATIENT CARE ENVIRONMENT OF CARE

ONE UNIVERSAL PRODUCT FOR ALL YOUR NEEDS

The world's first ready to use Hydrogen Peroxide sporicidal disinfectant.

Sani-HyPerCide™ Spray provides a powerful solution to address the most relevant pathogens, along with the ability to proactively protect against *C. diff.** with its powerful sporicidal Hydrogen Peroxide formulation.

Sani-HyPerCide™ Spray is the only H₂O₂ sporicidal RTU spray designed to provide powerful protection against HAI causing microorganisms across general, isolation, and terminal settings without compromising compatibility.**

Standardize your disinfection protocol with a single streamlined solution that's compatible, safe and easy to use.

COMPATIBLE BY DESIGN™

Disinfecting equipment with products not designed for their surface materials can cause surfaces to become unsightly, brittle and cracked, which can result in surfaces becoming increasingly hard to disinfect from harmful bacteria, increasing the risk of HAIs. Improved compatibility helps decrease costs associated with excess inventory and expensive device and equipment replacement.
