Terumo Medical Corporation

Needlesticks are a pain...

Terumo Medical is the preferred NuEdge CONNECT program for Hypodermic products.

Terumo Medical Corporation designs injection and infusion therapy devices that help clinicians consistently perform at their very best. With our innovative hypodermic needles, IV catheters, winged needle sets and more, we're putting high quality into even the most routine parts of healthcare. Terumo's products and tools are designed to help improve operational efficiencies and enhance clinical and patient outcomes. We've engineered our devices not only with the clinician in mind but also their patients.

Our hypodermic products are known for combining safety, sharpness and ease of use to offer clinicians and their patients the most comfortable experience possible. Our **SurGuard3** safety hypodermic needle offers you, the clinician, multiple options for safety activation; thumb, finger, and hard surface. Offering one single product with 3 modes of activation could potentially help minimize the need for training and retraining, empowering a versatile floating clinical staff which is imperative during busy seasons.

Surshield™ safety winged butterfly and infusion sets offer the clinician a sharp and effective butterfly that was engineered to reduce injection pain providing more comfortable injections for patients¹ the clinician with a safer and easier to use product, and the medical facility with an effective and cost-effective butterfly. Our **Surshield™** safety winged butterfly and infusion sets are unique from other safety butterflies in that most safety winged butterflies are designed to be activated one way and require a second hand but **Surshield™** provides **two** different one-handed activation options; hard surface and thumb. Two one-handed activation techniques give you options without sacrificing your personal technique.

Terumo's IV catheters were also created with the clinician and patient in mind. Our **SurFlash** IV catheter gives a first flash of blood when you are successfully in the vein and a second flash when the catheter is properly placed. As the only IV catheter on the market to provide this technology this aids clinicians in providing a better experience for patients when you don't need to re-stick or go "fishing" once in the vein.

Terumo's medical devices are fashioned to increase patient comfort by combining safety, sharpness and ease of use because your patient's satisfaction matters, but so should yours. View our full portfolio here: www.terumotmp.com
